

Template Name SafeNet

The goal of this system is to create a secure and intelligent platform that helps in identifying, reporting, and minimizing cyberbullying incidents. It aims to protect users from online harassment by combining AI-based detection with manual reporting features to ensure a safer digital environment.

Objectives:

- Provide a secure platform for users to report cyberbullying.
- Enable automatic detection of abusive or harmful content.
- Support admins with tools to review, escalate, or resolve cases.
- Offer helpful resources (helplines, guides, counseling) to victims.
- Promote a safer digital environment by reducing harassment and online abuse.
